

Maryum Akram

AI Engineer · Agentic Systems Builder · LLM Integration Specialist

Lahore, Pakistan | maryumakram.official@gmail.com | linkedin.com/in/maryumakram | github.com/MaryumAkram16 | maryumakram16.github.io/maryum-portfolio

PROFILE

I design and build autonomous AI agents and production-grade automation systems — voice agents, RAG pipelines, and multi-step workflows that run unattended in real-world environments. My work spans healthcare, e-commerce, home services, and career intelligence, independently architected and deployed using n8n, Retell AI, OpenAI, Google Gemini, and Anthropic's Claude API, with cloud deployments on Google Cloud Run and Docker.

Two of my projects — RoshanAI and GharFix — were submitted to the Google AI Seekho Hackathon 2026 (Phase 1 and Phase 2 respectively), earning Silver Tier recognition.

TECHNICAL SKILLS

- Agentic Systems: Autonomous AI Agents, Multi-step Workflow Orchestration, n8n, Modular Pipeline Design
- AI & LLMs: OpenAI GPT-4o, Google Gemini, Anthropic Claude API, Prompt Engineering, RAG, pgvector
- Voice AI: Retell AI, Real-time Call Handling, Intent Classification
- Cloud & Deployment: Google Cloud Run, Docker, AWS, FastAPI
- Databases: PostgreSQL (pgvector), Supabase, Firebase
- Frontend: React, TypeScript, Tailwind CSS
- Integrations: Slack API, Google Calendar API, Google Maps API, Gmail API

PROJECTS

MediLens — AI Hospital Automation Platform [GitHub →](#)

Personal Project · Flagship

Tech: n8n · Google Gemini · Supabase · Retell AI · Docker · Google Cloud Run

- Independently architected and deployed the platform end-to-end, containerized with Docker via n8n and Google Cloud Run
- Built a production-grade AI voice agent for patient appointments using Retell AI — books, cancels, and reschedules by voice with real-time data lookup via Supabase, no staff involved
- Built an automated complaint management system with structured intake, routing, and resolution tracking
- Built a hospital admin command center — a dashboard giving staff a decision-support view across appointments and complaints

Lumina — AI E-commerce Voice Support Agent [GitHub →](#)

Personal Project

Tech: Retell AI · OpenAI · n8n · Webhook Integrations

- Built an autonomous AI voice agent handling real-time e-commerce delivery support calls end-to-end
- Designed webhook-based fallback routing for complex escalations to human agents

RoshanAI — AI Career Intelligence Platform [GitHub →](#)

Google AI Seekho Hackathon 2026 — Phase 1 Submission

Tech: GPT-4o · n8n · React · OpenAI API

- Built Pakistan's first AI career intelligence platform delivering real-time skill gap analysis and job market insights
- Built a GPT-4o-powered resume analysis engine mapping user skills against live market demand
- Automated career roadmap generation with personalized learning paths based on target role gaps

GharFix — AI Home Services Platform [GitHub →](#)

Google AI Seekho Hackathon 2026 — Phase 2 Physical Submission

Tech: n8n · Google Gemini · Supabase · React · Google Maps API · Google Calendar API

- Independently architected an end-to-end AI platform connecting homeowners with verified service providers
- Implemented an AI-powered booking flow with real-time availability and automated service matching
- Designed modular n8n workflows handling job routing, provider notifications, and status tracking

SkillSync AI — Career Discovery Platform [GitHub →](#)

Personal Project · Production-Hardened

Tech: React · Firebase/Firestore · Node.js · Express · GitHub Actions CI

- Architected and built a career discovery platform — dashboard, market-demand radar, adaptive skill assessment, resume parser, and AI career mentor — serving 9 real users
- Hardened the platform against 12 adversarial attack scenarios (identity spoofing, value poisoning, resource poisoning) with rate limiting and audit-logging middleware
- Maintained a CI pipeline (GitHub Actions) with 94/94 tests passing and clean lint on every merge

OTHER PROJECTS — CLASSICAL ML

- **Consumer Complaint Product Classification** — CFPB complaint classifier, 9 categories; trained on 3.8M+ rows via out-of-core learning (HashingVectorizer + SGDClassifier), 12GB RAM budget; 85.3% accuracy, deployed on Streamlit. [GitHub →](#)

CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals
- EF SET English Certificate — 59/100, B2 Upper Intermediate (June 2026)
- AI Seekho 2026 (Google for Developers × Pakistan Ministry of IT & Telecom) — Silver Tier, Phase 1 Online Challenge
